

SKIRTING MESH

Skirting mesh offers an affordable solution to protect under a caravan or static home. The mesh is manufactured from High Density Polyethylene and is U.V protected for outdoor use. It deters children and pets from hiding or crawling underneath your home and at the same time stops foreign objects such as footballs or leaves. Due to the mesh structure it also allows for free airflow to pass directly under your home and has been coloured black to appear as a shaded area, thus hiding unsightly service pipes or cables. The mesh comes supplied in a roll form and is easy to cut so that an exact fit is possible even if your base is on a slope. The mesh is suitably rigid for longer term applications and can be attached to most styles of homes with either cable ties or directly onto a wooden frame using U shaped nails.

ADVANTAGES

- Prevents unauthorised access
- Hides unsightly services
- Simple, cost-effective
- Allows good airflow
- Ideal non-permanent solution
- Prevents litter/leaves clutter
- U.V. protected, easy to install

Mesh Structure

Visible hot, cold and drainage pipes are unsightly and potentially a health & safety danger to young children & pets.

Caravan Skirting Mesh hides unsightly pipes & cables and ensures the underneath is ventilated, whilst limiting the risk of injury to children and pets from climbing underneath.
